NexusVault Trading Framework
(DCMA & PMCN Digital Assets)

Platform: NexusVault (Android Application)
Issuer / Ecosystem Owner: Decima Technologies
Digital Assets:

- Decima (DCMA) (Total Supply: 21,000,000 Coins)
  - Current Trade Price: $2,53,056 USD as on 17th February 2026
- Prophet Muhammad Coin – Nobel (PMCN) (Total Supply: 500,000,000,000 Coins)
  - Current Trade Price: $107 Trillion USD as on 17th February 2026

- Protocol Standard: BEP-20 (Binance Smart Chain Compatible)

1. Trading Model Overview

Trading within NexusVault operates under a **closed-loop digital asset exchange framework** designed to provide:

- Structured peer-to-peer (P2P) order matching
- Transparent price discovery within the app environment
- Recorded transaction logs for auditability (on-chain)
- Controlled liquidity architecture

The platform facilitates **buyer–seller matching**, not unilateral price imposition.

2. How Price Discovery Works

Prices visible in the app are determined by:

- Live bid (buy) orders placed by users
- Live ask (sell) orders placed by users
- Completed transaction history
- Internal liquidity mechanisms supporting market depth

The system does **not arbitrarily assign prices**. Trades occur only when buyer and seller price expectations match.

3. Liquidity Structure

NexusVault operates through:

- P2P wallet-to-wallet transfers
- In-app matching engine
- Ecosystem-backed liquidity pools

- Product-linked value support architecture

Liquidity is supported by ecosystem participation and platform growth, rather than external speculative exchange volatility.

4. Custody & Transfers

- Tokens follow BEP-20 standards
- Can be stored in compatible wallets (Trust Wallet, Binance, NexusVault etc)
- Wallet balances are visible within the app and on BSCSCAN.COM.
- Pricing information is exclusively available on NexusVault Android App.
- P2P transfer capability exists between verified users

The system architecture allows blockchain compatibility while maintaining controlled trading within NexusVault.

5. Transparency & Compliance Orientation

- Every trade generates a transaction record
- No hidden minting beyond declared supply
- Total token supply is fixed and published
- Smart contract structure aligns with BEP-20 standards
- Risk disclosures are displayed within onboarding

The platform is designed as a **digital asset ecosystem**, not as a regulated stock exchange or banking institution.

6. Risk Acknowledgment

As with all digital assets:

- Prices are market-driven
- Liquidity may vary
- Volatility is possible
- Digital asset participation carries inherent risk

Participants are advised to conduct independent evaluation prior to engaging in transactions.

7. Strategic Positioning

NexusVault is being developed as:

- A structured digital asset ecosystem
- A technology-driven asset utility platform
- A controlled trading environment prioritizing stability over speculative volatility
